Abstract

Abay GERD Token (GERD) is a decentralized cryptocurrency initiative inspired by Ethiopia's monumental Grand Ethiopian Renaissance Dam (GERD) and the Abay (Nile) River, the lifeline of the region. The project is designed for the global community, but it especially favors users in Ethiopia as a tribute to the source of the Abay River and the home of the GERD.

Unlike many crypto projects designed to benefit a privileged few through presales or seed rounds, GERD is by the people, for the people.

With a total supply of **120 billion tokens**, the project is built on fairness, transparency, and community empowerment. The smart contract source code is available on **GitHub** and fully viewable on the **Binance Smart Chain (BSC)**, ensuring complete transparency and open-source verifiability.

---

1. Philosophy & Vision

Abay GERD Token champions **equity**, **decentralization**, and **grassroots empowerment**. The project favors Ethiopian users without excluding global participation. We intentionally avoid private sales, venture capital allocations, or seed investors—making this a uniquely people-powered initiative.

Inspired by the symbolic unity and ambition of the GERD project, GERD Token embodies the resilience, pride, and potential of the Ethiopian people, while inviting the world to participate in a fair and open digital economy.

2. Tokenomics

- **Total Supply:** 120,000,000,000 GERD Tokens (2 decimal places)

- **Locked Reserve:** 115,000,000,000 tokens will be locked, with a **vesting release of 1 billion per year for 115 years**, ending in **2140** (the same year the last Bitcoin is projected to be mined)

- **Auditable Vesting Smart Contract is under development** (expected implementation: June 2025)

Updated Annual Release Mechanism:

- 🎁 **500,000,000 GERD** airdropped **evenly to all existing wallets**

  $$\text{Airdrop size} = {500{,}000{,}000 \text{ GERD}}/{\text{Number of Wallets snapshot on April 23rd every year}}$$

- 🔁 **250,000,000 GERD** allocated to staking rewards

- 🔁 **250,000,000 GERD** allocated to liquidity provision only if pool balance < 500M; otherwise, it will be permanently burned

🗓️ **Airdrop Frequency:** Once per year, every year, for 115 years

🎯 **Eligibility:** All wallets holding GERD at the time of distribution automatically qualify

💎 **Early Adopter Advantage:** The earlier you join, the more years of airdrops you receive

This long-term mechanism guarantees recurring benefits and builds strong incentives for community retention.

3. Community Distribution

GERD Token is distributed fairly—**no presales**, **no early investor advantage**, and **no central ownership**.

- 🌍 **Global Claim Offer:**
    - 10,000 GERD tokens per wallet

- o Capped at 50,000 wallets

- ET **Ethiopia location-Specific Claim:**

  - o 75,000 GERD tokens per wallet

  - o Capped at 25,000 wallets

This hybrid distribution model ensures fairness while honoring the source of the GERD vision.

---

4. Smart Contracts and Transparency

All smart contracts are **open-source**, published on **GitHub**, and **deployed on BSC**. Community members are encouraged to inspect and verify the code.

Ethereum Network Readiness (if ever needed)

While there are **no current plans to migrate to Ethereum**, GERD Token is technically prepared in case the need or the community ever decides a migration is necessary in the future. Wallet addresses on BSC and Ethereum are identical due to shared key derivation, so holders would automatically receive their migrated tokens on Ethereum — simply by importing the new ETH contract address into their existing wallet.

This provides:

- A seamless option for future cross-chain support if ever required
- Zero friction for token holders in case of migration
- Zero friction for token holders in case of migration

5. Use Cases

GERD Token is more than symbolic—it has **real-world utility**:

- 💼 **Digital Economy:** Enable Ethiopian businesses to accept crypto

- 🌍 **Remittance Gateway:** Support low-cost transfers from the diaspora

- 🏢 **Financial Inclusion:** Provide access to the unbanked population

- 🤝 **Community Development:** Fund local projects via decentralized grants

---

6. Conclusion

Abay GERD Token is more than a crypto project—it's a **movement** rooted in **transparency** and **community empowerment**. Through a sustainable release model and fair global participation, it aims to shape a future as monumental as the dam it was inspired by.
